Education

Indian Institute of Information Technology (IIIT) Bhagalpur **November 2022 — June 2026**
Bachelor of Technology in Computer Science and Engineering **GPA: 8.29/10**

Experience

Evernorth Health Services (The Cigna Group) Hyderabad, India
Software Engineering Analyst **July 2026 – Present**

- Built and deployed a production GenAI service that uses LLMs to automate purge-or-hold decisions for healthcare files flagged for rule violations (about **40K** held of **400K** received annually, **12K** manual-review hours); projected to cut that effort by **50%** and mitigate **$2M+** in potential annual client SLA penalties.
- Designed the recommendation pipeline (Java, Spring Boot, MongoDB, LiteLLM, REST APIs): it filters **12 months** of historical records by hold reason and rule, then uses prompt engineering to produce a suggested action, confidence score, seasonal patterns, and risk flags via event-driven workflows and cron-scheduled batch jobs.
- Ran LLM evaluation across **5** models on real production files, checking answer consistency and input/output token usage; configured LiteLLM model routing with backup models and wrote unit, integration, and end-to-end tests.
- Replaced static alert emails with emails that carry the suggestion, plus an analyst dashboard to accept or override it, storing each decision and reason for auditability.
- Mapped **24** file-processing stages and broadcast them as real-time Kafka status events into MongoDB, powering file tracking that surfaces files nearing SLA first; added distributed tracing with trace and span IDs across microservices for monitoring and debugging.

Software Engineering Intern **July 2025 – June 2026**

- Reduced end-to-end file-processing latency by **40%** by migrating a legacy mainframe flow to an asynchronous AWS pipeline (S3, Lambda, SQS, Kafka).
- Cut restore time for **30+** OpenSearch indexes (**120GB+**) to about **5 minutes** by designing disaster recovery with Python REST utilities and S3-based scripts.
- Automated detection and routing of **over 1,000** unmatched medical-file cases daily with a scheduled Spring Boot batch service; idempotent processing and ShedLock prevented duplicate alerts.
- Implemented blue-green AWS Lambda deployments and automated Artifactory-to-S3 artifact publishing using Terraform.

Technical Skills

- **Languages & Frameworks:** Java, Python, C++, JavaScript, SQL, Spring Boot, React.js, Node.js, Express.js
- **Backend & Distributed Systems:** Microservices, REST APIs, Kafka, Event-Driven Architecture, Batch Processing, Idempotent Processing, Distributed Locking (ShedLock), Distributed Tracing
- **Databases & Caching:** MongoDB, MySQL, PostgreSQL, DynamoDB, OpenSearch, Redis
- **Cloud & DevOps:** AWS (S3, Lambda, SQS, EC2, CloudWatch), Terraform, Docker, Jenkins, CI/CD, Monitoring
- **GenAI:** LLMs, Prompt Engineering, LiteLLM, LLM Evaluation, Guardrails, AI-Assisted Development (Cursor, Kiro, GitHub Copilot)
- **Engineering Practices:** Data Structures & Algorithms, OOP, System Design, JUnit, Unit/Integration/E2E Testing, Git, Linux, Agile

Projects

Uber-Microservices | *Distributed Ride Matching System* GitHub

- **Architected** a distributed ride-matching system with **3 Spring Boot microservices** for ride, location, and matching workflows, using **Kafka, Redis Geo, MySQL, and Docker** for asynchronous event processing and real-time finding.
- **Implemented** location-aware driver matching using **Redis Geospatial queries**, Kafka producer-consumer flows, REST APIs, and distance/rating-based scoring across a **5-state ride lifecycle**.

Achievements

- **Competitive Programming:** Solved **1100+ DSA problems** across **LeetCode** & **GeeksforGeeks** (Max Rating: **1897 / Knight**, Top **4.7%** globally).
- **Led** the Coding Club at IIIT Bhagalpur, mentoring **50+ students** in DSA and backend development.
